

# DID YOU KNOW?

## TOP REASONS TO USE THE PREVEX ON OVENS & DRYERS

the PrevEx is our flammability analyzer for lower flammable limit monitoring (LFL/LEL)

The key hazards in these processes are explosions & fires from the build up of solvent vapors in the oven or dryer atmosphere. Using a monitoring system, like the PrevEx, helps to meet ALL safety requirements, improve the efficiency of the process and significantly lowers energy requirements.

INCREASED  
SAFETY

MEETS STRICT  
STANDARDS &  
REGULATIONS

COST  
SAVINGS  
ON FUEL

REAL TIME  
MEASUREMENT

ACCURACY

provides precise readings  
failsafe design

SPEED

less than 1-second response time  
sampling system optimized to be fast

### SAVINGS

reuse, rather than expel, some of the hot exhaust stream back into an oven zone  
increase production speed without increasing existing air or fuel costs  
lower fuel costs by burning richer samples

### REDUCTION

ventilation air without affecting existing production rates  
oven exhaust rates to lower the demand on VOC destruction oxidizers
